

Saudi Arabia – Riyadh

Global Youth Tobacco Survey (GYTS)

FACT SHEET

The Saudi Arabia – Riyadh GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, environmental tobacco smoke exposure (ETS), cessation, media and advertising, and school curriculum. These determinants are components Saudi Arabia could include in a comprehensive tobacco control program.

The Saudi Arabia – Riyadh GYTS was a school-based survey of male students in standards 7 and 8, and forms I and

II, conducted in 2001. A two-stage cluster sample design was used to produce representative data for all of Riyadh. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 87.5%, and the overall response rate was 87.5%. A total of 1830 students participated in the Saudi Arabia – Riyadh GYTS.

Prevalence

- 34.5% of students had ever smoked cigarettes
- 20.2% currently use any tobacco product
- 10.8% currently smoke cigarettes
